RECORDS OF WATER-LEVEL MEASUREMENTS IN DALLAM, HANSFORD, HARTLEY,
HUTCHINSON, MOORE, OCHILTREE AND SHERMAN COUNTIES, TEXAS

Compiled by

C. R. Follett, Engineer
Texas Board of Water Engineers

March 1954

This bulletin contains measurements of the depth to water below land-surface datum in wells in Dallam, Hansford, Hartley, Hutchinson, Moore, Ochiltree, and Sherman Counties, which are in the Texas Panhandle north of the Canadian River. It is one of a series of publications which contain measurements of the water levels in selected observation wells.

Inventories of water wells were made in Dallam, Hansford, Hartley and Ochiltree Counties during the 1936-40 period. In 1937 water-level measurements were also made in selected wells in Sherman County. Very few measurements were made during the war years. In 1950 measurements were resumed in many of these wells and additional observation wells were selected in the irrigated areas of the counties mentioned above, and also in Moore and Hutchinson Counties. These measurements have been made as a part of a cooperative program of ground-water investigations by the United States Geological Survey and the Texas Board of Water Engineers. Some of the measurements made by the Soil Conservation Service of the Department of Agriculture are included.

If more than one water-level measurement was made during a month, only the highest water level is given in this report. The accompanying maps show the location of the observation wells with the numbers assigned to them in the records. Records of water wells and geologic data are given in the following list of publications.
