RECORDS OF WATER-LEVEL MEASUREMENTS IN KINNEY, UVALDE AND
VAL VERDE COUNTIES, TEXAS

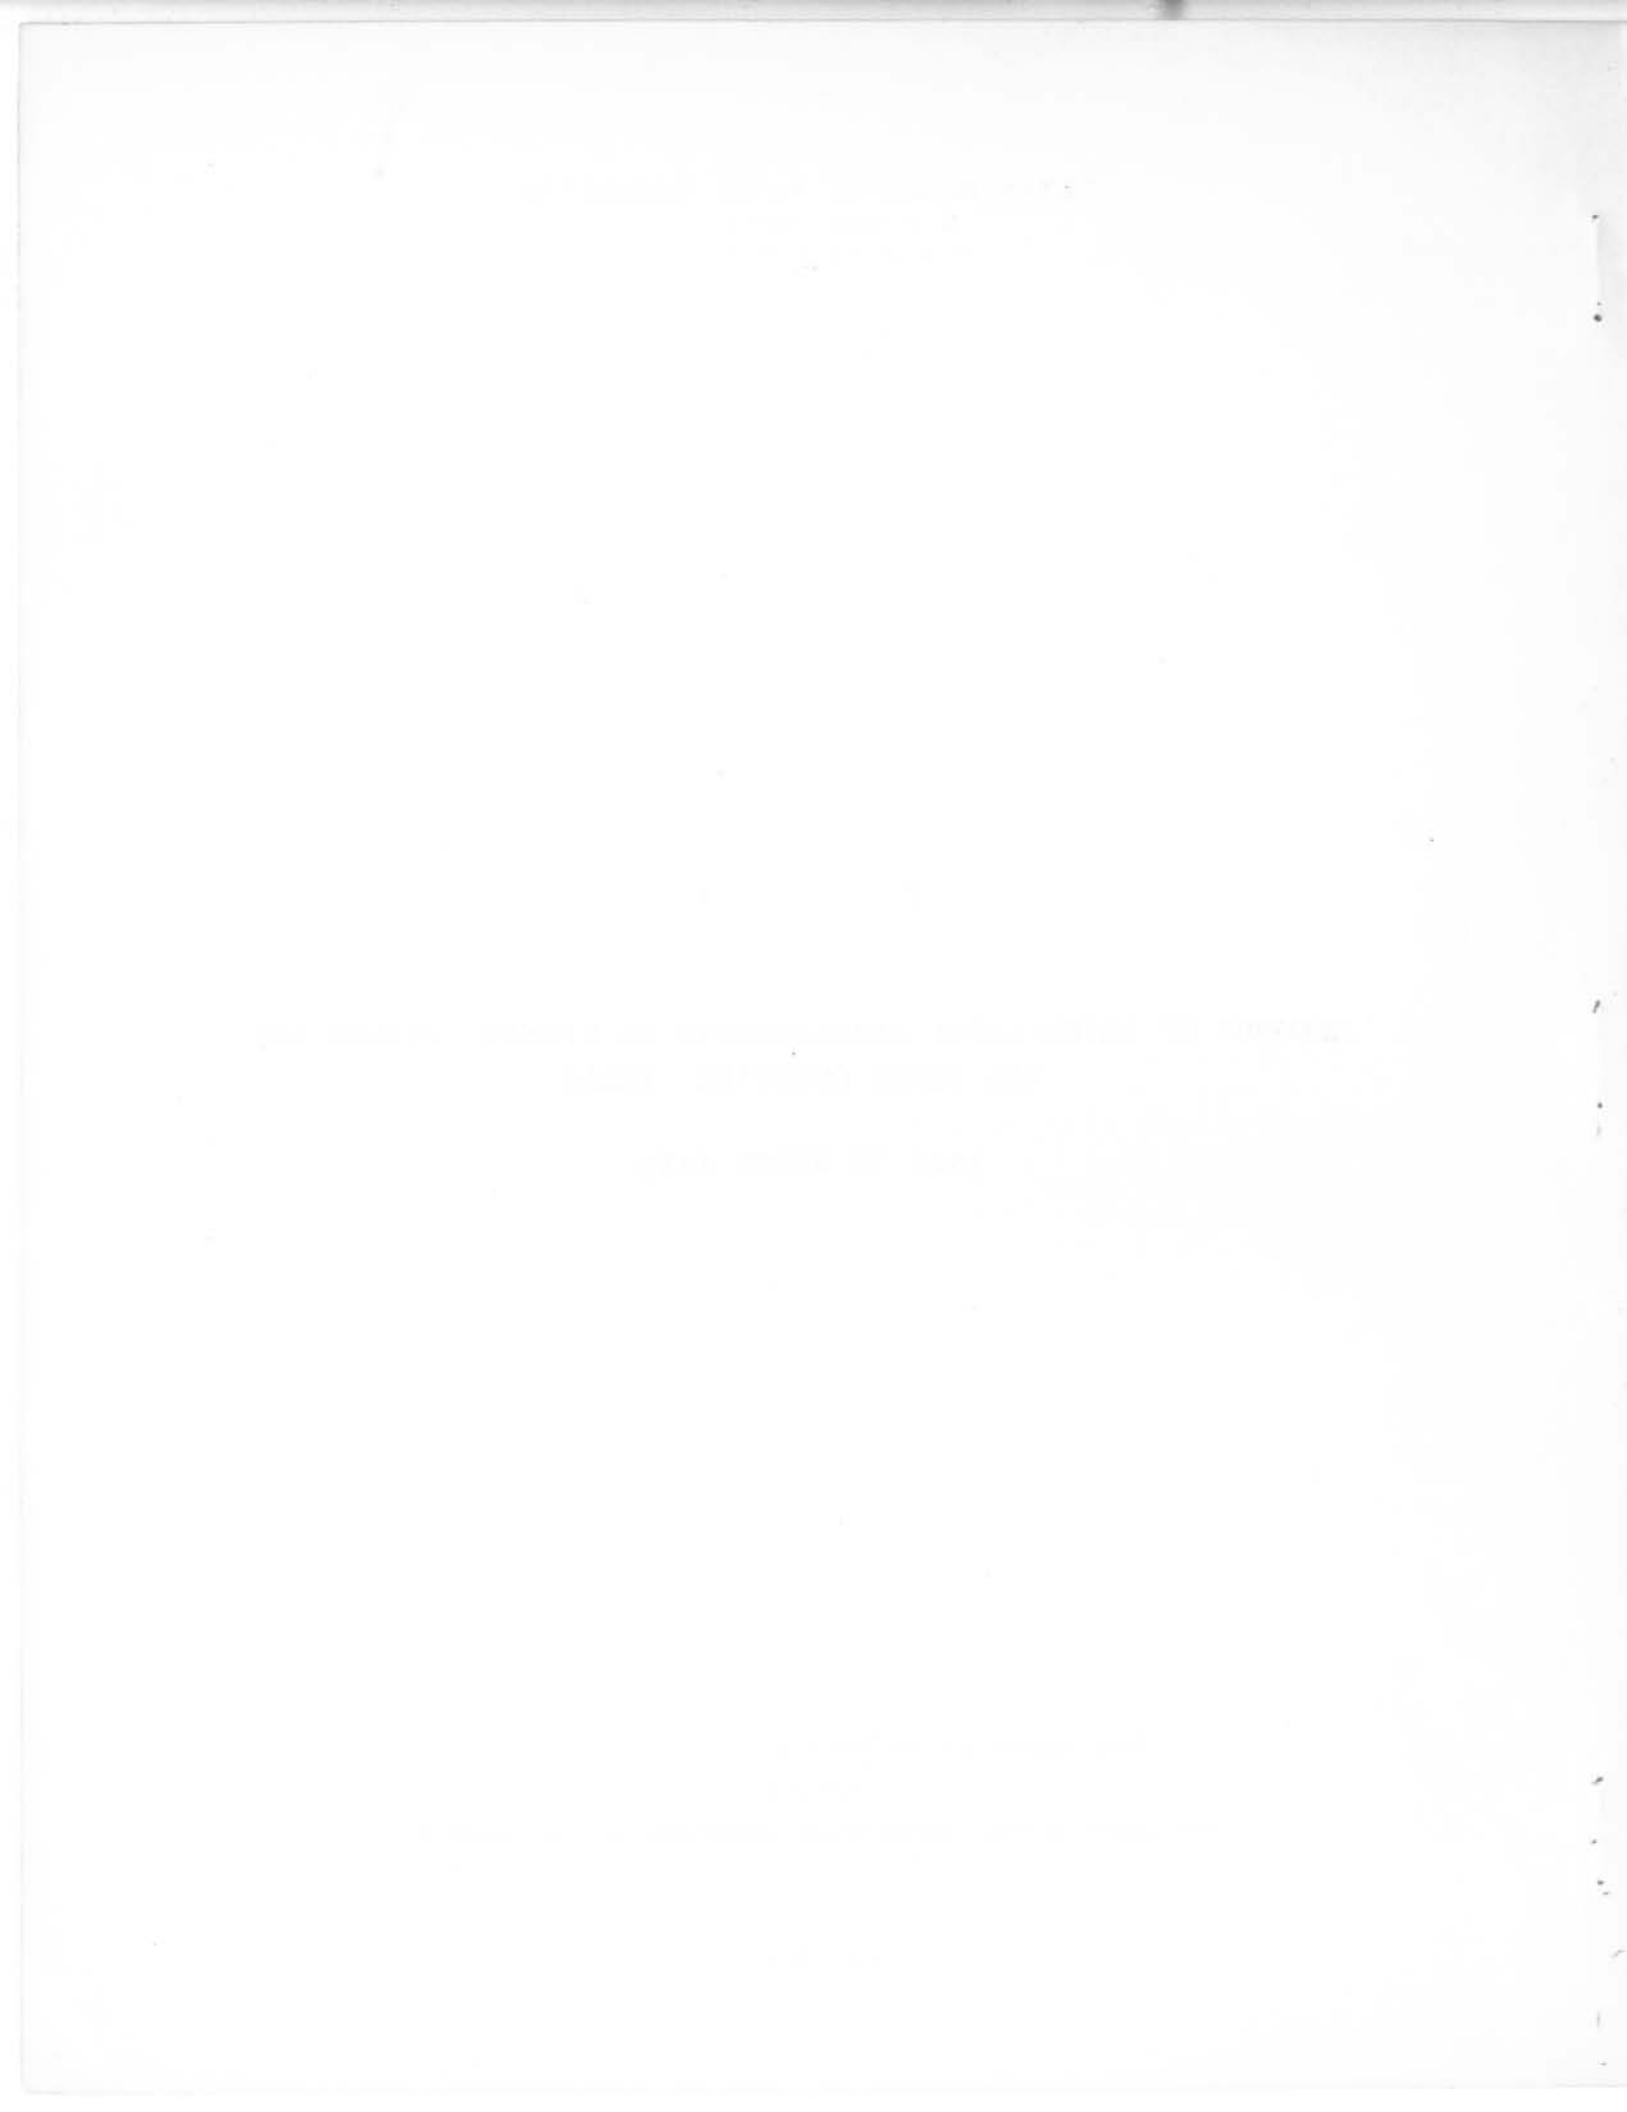

1929 TO MARCH 1956

Compiled by
C. R. Follett, Engineer
Texas Board of Water Engineers
May 1956

INTRODUCTION

The Texas Board of Water Engineers is charged with making independently, or in cooperation with other state and federal agencies, scientific investigations of the source, amount and quality of ground-water supplies. To evaluate effects of ground-water development in relation to available supply, periodic measurements of water levels are made in the principal reservoirs of the state through an observation well program financed cooperatively by the Texas Board of Water Engineers, and the United States Geological Survey.

Water levels in some observation wells are published annually in Water-Supply Papers of the Geological Survey. County water-level reports are published periodically by the Texas Board of Water Engineers, and include recorded water levels in selected observation wells. This bulletin contains measurements of the depth to water in feet below land-surface datum in 55 wells in Kinney County, 121 wells in Uvalde County, and 12 wells in Val Verde County. These records cover the period from 1929 to March 1956 in Uvalde County and from 1937 to March 1956 in Kinney and Val Verde Counties.

During 1930-32, an investigation was made of the water resources of Medina and Uvalde Counties by the Texas Board of Water Engineers and the Geological Survey. The results of the investigation was published in 1936 in Geological Survey Water-Supply Paper 678. During parts of 1937-39, an inventory of wells in Kinney and Val Verde Counties was made, and the results published by the Texas Board of Water Engineers in 1940. The results of later studies in Kinney and Uvalde Counties are now in the open file and will soon be published as Bulletin 5608. Water-level measurements in selected observation wells made during the time of the investigations, as well as interim measurements, are included in this bulletin.

The water-level measurements are reported in feet below land-surface datum. The accompanying maps show the locations of the observation wells. The well numbers on the map correspond to those outside the parentheses in the table of measurements. Where there is a number inside the parentheses, it is a number assigned to this well in some publications prior to 1956. Hydrographs showing the fluctuation of water levels in some wells and the annual precipitation will be found as follows: Kinney County on pages 26 and 25; Uvalde County on pages 62 and 63; and Val Verde County on page 70. Records of water wells, geologic data and discussions of ground-water conditions may be found in the included list of publications.
