## RECORDS OF WELLS IN TRAVIS COUNTY, TEXAS

By

Ted Arnow, Geologist

United States Geological Survey

July 1957

### INTRODUCTION

The purpose of this report is to present records of wells and springs for Travis County, Tex., collected during the period 1937-55. The report contains records of 948 representative wells and springs (table 1), drillers' logs of 135 wells (table 2), and analyses of water samples from 719 wells and springs (table 3).

A well-inventory report by W. O. George, J. C. Cumley, and C. R. Follett, entitled "Records of wells and springs, drillers' logs, water analyses, and map showing locations of wells and springs in Travis County, Tex.," was released in August 1941 by the Texas Board of Water Engineers in cooperation with the United States Geological Survey. The present report contains much information from the report published in 1941, plus data collected between 1941 and 1955. The recent data were collected by many individuals. The numbers of wells published in the 1941 report were changed to conform to a grid system to facilitate the location of wells. The numbers for wells listed in the 1941 report and the corresponding numbers in this report are given in table 4.

Plate 1 shows locations of the wells and springs listed in the tables. The map is divided into 10-minute quadrangles of latitude and longitude. The quadrangles are lettered alphabetically and the wells and springs are numbered within each quadrangle. All well numbers in the tables refer to numbers on the map.

### GEOGRAPHY

Travis County is in central Texas (fig. 1). The county seat is Austin, which is also the capital of Texas. The population of the metropolitan area of Austin in 1955 was estimated to be 167,100.

The northwestern half of the county is part of the physiographic province of Texas known as the Edwards Plateau. In Travis County this is a highly dissected plateau with wooded hills rising in some places more than 500 feet above the drainageways. In marked contrast, the southeastern half of the county is gently rolling prairie land which is part of the physiographic province known as the Gulf Coastal Plain. These provinces are separated by the scarp of the Balcones fault zone, which rises 100 to 300 feet above the Coastal Plain. The scarp, however, is not a vertical cliff; it is an indented line of sloping hills leading up from the lower plain to the plateau summit.

FIGURE I.-Map of Texas showing location of Travis County.

Almost the entire county is drained by the Colorado River and its tributaries. Lake Austin and Lake Travis, which are formed by the Tom Miller and Mansfield Dams, respectively, on the Colorado River, are part of the power, flood-control, water-conservation, and recreation project of the Lower Colorado River Authority.

The average annual temperature at Austin for the period 1856-1955 was 68.2°F, according to records of the U. S. Weather Bureau. The long-term mean annual precipitation at Austin is 35.18 inches. The mean annual precipitation for the drought period 1947-56, however, was only 24.04 inches.

#### GENERAL GEOLOGY

The rocks that crop out in Travis County are primarily of sedimentary origin and of Mesozoic (Cretaceous) and Cenozoic age. They consist largely of limestone, clay, and sand strata which dip southeastward toward the Gulf of Mexico at an angle slightly greater than the slope of the land surface. Therefore, in going from southeast to northwest the outcrops of progressively older formations are encountered, and the rocks lowest in the geologic column have the highest topographic exposure.

The Balcones fault zone, which extends from Williamson County to Uvalde County, extends the full length of Travis County on a line passing through Manchaca, Austin, and McNeil. Here the orderly sequence of formations is replaced by an outcrop pattern controlled by the faults, most of which are normal faults with the down-thrown side toward the coast.

Cretaceous rocks of the Trinity group (Travis Peak formation and Glen Rose limestone) crop out in much of the county west of the Balcones fault zone. The Hosston and Sligo formations of Cretaceous age underlie the Travis Peak formation but do not crop out in Travis County. The rocks that crop out in the fault zone are primarily those of the Fredericksburg group (Walnut clay, Comanche Peak limestone, and Edwards limestone), the Washita group (Georgetown limestone, Grayson shale, and Buda limestone), the Eagle Ford shale, and the Austin chalk, all of Cretaceous age. The outcrop area east of the fault zone is occupied by the Austin chalk, the Taylor marl, and the Navarro group, all of Cretaceous age, and the Kincaid formation of Eocene age.

Relatively small bodies of igneous rocks crop out southeast of Austin, the largest outcrop being at Pilot Knob. These rocks are primarily nepheline basalt and tuff and are of Cretaceous or later age.

Large alluvial deposits are found east of the Balcones fault zone. Recent alluvium is confined largely to the valley of the Colorado River. The Uvalde gravel of Pliocene(?) age and the Leona formation of Pleistocene age, however, form extensive deposits scattered over the southeastern part of the county.

#### RELATION OF THE GEOLOGY TO THE OCCURRENCE OF GROUND WATER

The Hosston, Sligo, and Travis Peak formations are believed to be the oldest and lowest formations beneath Travis County that offer possibilities for ground-water development. These formations contain a number of sands, sandstones, and limestones known locally as the "Trinity sands", which yield water that has a considerable range in quality. Yields of wells tapping the "Trinity sands" have a

large range. West of the fault zone the yields generally are small to moderate. Yields are greater in the fault zone and to the east, the largest reported yield being 275 gpm from well H-225. East of the fault zone the water may flow naturally from wells at low elevations, the largest reported flow being 170 gpm from well H-70. The water from the "Trinity sands" generally is of suitable quality for domestic and stock use, but in places it is highly mineralized.

The Glen Rose limestone generally yields only small quantities of water. In most places the water becomes more highly mineralized with depth, calcium and magnesium sulfate accounting for most of the increase.

The Walnut clay is not known to yield water to wells in Travis County.

The Comanche Peak, Edwards, and Georgetown limestones form a single hydrologic unit known as the Edwards and associated limestones, and the individual formations are not distinguished from each other by most well drillers. These limestones yield water to wells from cracks, crevices, and solution cavities, and consequently yields have a wide range depending upon the number of openings encountered by the well. The largest yield reported is 500 gpm from wells H-202, H-203, and H-204. Barton Springs (H-61), one of a chain of large springs in the Balcones fault zone, discharges from this limestone unit in the southern part of Austin. In the fault zone the water from the Edwards and associated limestones is hard but otherwise suitable for public supply and irrigation. Southeast of a line running east of Pflugerville, through the eastern part of Austin, and east of Manchaca, however, the water in the Edwards and associated limestones is charged with hydrogen sulfide and still farther east is highly mineralized.

The Grayson shale (locally known as the Del Rio clay), Buda limestone, and Eagle Ford shale are not known to yield water to wells in Travis County.

The Austin chalk, Taylor marl, Navarro group, and Kincaid formation are poor aquifers but in places may yield small quantities of water to shallow, large-diameter wells.

The Uvalde gravel is not known to yield water to wells in Travis County.

The Leona formation and the Recent alluvium supply moderate to large quantities of water to shallow, large-diameter wells. The largest yield reported is 646 gpm from well G-36, which obtains water from the Recent alluvium of the Colorado River. Yields from the Leona may decrease during periods of extended drought because of the thinness of the formation and its small opportunities for recharge.

Table 1.- Records of wells and springs in Travis County, Texas

All wells are drilled unless otherwise noted in remarks column.

Water level : Reported water levels given in feet; measured water levels given in feet and tenths.

Method of lift and

type of power : A, airlift; B, bucket; C, cylinder; Cf, centrifugal; E, electric; G, gasoline; H, hand; J, jet; N, none; T, turbine; W, windmill. Number indicates horsepower.

Use of water : D, domestic; Ind, industrial; Irr, irrigation; N, none; P, public supply; S, stock.

Table 2.- Drillers' logs of wells in Travis County, Tex.<sup>\*/</sup>

	Thickness (feet)	Depth (feet)		Thickness (feet)	Depth (feet)
Well A-16					
Owner: G. H. Rodgers. Driller: P. F. Griffin.					
Lime and sandstone -----	49	49	Gumbo, blue, and lime layers -----	7	672
Limestone, gray -----	35	84	Lime and gypsum in layers -----	4	676
Limestone, gray, shelly -	46	130	Gypsum and lime -----	3	679
Limestone, shelly -----	85	215	Lime rock -----	20	699
Lime, and sandstone -----	36	251	Lime, gray, shelly --	29	728
Gumbo, blue -----	7	258	Shale and gumbo in thin layers -----	15	743
Limestone -----	107	365	Shale, blue and brown, gumbo with sand and sulfur -----	30	773
Limestone, and shale ----	14	379	Gumbo, blue with sand	5	778
Gravel, coarse-grained, water-bearing -----	66	445	Shale, blue, and sand	3	781
Gravel, coarse-grained, water-bearing, lime ---	35	480	Corrected depth -----		653
Limestone boulders, hard, blue gumbo in layers --	11	491	Shale, gumbo, boulders	15	668
Lime, gypsum, blue gumbo in layers -----	17	508	Gumbo, blue and shale	88	756
Limestone -----	6	514	Shale, blue and brown gumbo -----	10	766
Limestone, hard -----	15	529	Shale, gumbo, and lime	5	771
Shell, hard layers of limestone -----	7	536	Gumbo, blue -----	3	774
Shale, shelly, shell, and hard limestone, shale in layers -----	5	541	Sand and lime -----	2	776
Gumbo, brown and blue in layers -----	17	558	Lime, sand and gumbo-	12	788
Sand rock -----	6	564	Lime and sand -----	5	793
Gumbo, chocolate-colored	17	581	Sand, dark gray -----	2	795
Limestone, hard -----	1	582	Lime, and sand rock -	8	803
Shale, brown and blue ---	4	586	Shale, black -----	12	815
Shale, brown and blue, boulders -----	26	612	Corrected depth -----		764
Gravel, red, and gumbo --	12	624	Lime, and sand rock -	4	768
Limestone -----	15	639	Iron, rock -----	6	774
Gumbo, red -----	15	654	Slate -----	11	785
Gumbo, blue, lime layers-	3	657	Slate, iron, rock ---	3	788
Lime and blue gumbo in layers -----	8	665	Gumbo, blue white, and gravel -----	4	792
			Slate -----	12	804
			Corrected depth -----		789

<sup>\*/</sup> The geologic names used in the logs are those of the drillers and do not necessarily accord with the stratigraphic nomenclature of the U. S. Geological Survey.

Table 2.- Drillers' logs of wells in Travis County--Continued

	Thickness (feet)	Depth (feet)		Thickness (feet)	Depth (feet)
Well A-42					
Owner: Basdall Gardner. Driller: Walter Johnson.					
Clay and marl -----	8	8	Limestone becoming sandy -----	100	444
Limestone; water at base of limestone; estimated yield 4.5 gpm -----	6	14	Sand, clean, sharp- Limestone, hard ---	2	446
Marl and lime, alternating; weak supply of water at 164 feet -----	150	164	Sand, fine -----	4	450
Limestone -----	180	344	Sand and shale ---	15	465
			Shale, blue -----	9	474
				10	484
Well A-45					
Owner: Basdall Gardner. Driller: B. W. Trull.					
Limestone, tan -----	40	40	Limestone, light gray, and sandy shale,		
Limestone -----	60	100	greenish-gray -----	40	520
Limestone, tan, dense, some sand at 190 feet-	120	220	Shale, tan and greenish- gray -----	25	545
Limestone, tan -----	60	280	No record -----	15	560
Limestone and sand -----	60	340	Limestone, sandy, changing to sand- stone and conglö- merate -----	95	655
Limestone, tan, sandy --	20	360	Limestone, tan, yellow, and pink; cherty --	45	700
Limestone, tan, very sandy at base -----	25	385	Sand -----	10	710
Limestone, tan, and sand- stone, coarse, some chert -----	60	445	Shale, blue-gray and yellow soft -----	20	730
No record -----	10	455			
Sand rock, light gray --	25	480			
Well B-37					
Owner: H. Reimers. Driller: E. D. Summerow.					
Soil -----	2	2	Shale -----	3	87
Limestone, sandy -----	38	40	Lime, blue -----	7	94
Shell-----	1	41	Shale, brown -----	8	102
Shale, blue -----	14	55	Shale, red, clayey -	7	109
Limestone, blue -----	4	59	Sandstone, hard, dark	4	113
Shale, blue clayey -----	25	84	Sandstone, brown ---	25	138

Marl, soft -----	3	2	84	7
Full of small shells, soft mud seams -----	3	8	88	3
Limestone, hard, fine, dense -----	1	0	89	3
Limestone, fine, dense, friable at top, weathered at bottom, fossils last 3 feet -----	5	1	94	4
Limestone, fossiliferous, porous, weathered -----	4	9	99	1
Limestone, fine, dense, few thin marl seams, bottom 3 feet -----	10	0	109	1
Limestone, dark gray, full of small shell fragments, last 2 feet porous -----	4	1	113	2
Limestone, soft, fine, dense -----	3	6	116	8
Full of small shells, patchy at bottom -----	2	0	118	8
Limestone, fine, dense, marl seams -----	7	10	126	6
Limestone, soft, muddy -----	2	0	128	6
Limestone, white fossiliferous -----	7	6	136	0
Limestone, fine, dense, few arenaceous spots ---	4	3	140	3
Limestone, fine, dense, broken at top -----	4	3	144	6
Limestone, dark gray, full of shell fragments --	7	5	151	11
Limestone, fine, dense, arenaceous -----	3	2	155	1
Limestone, arenaceous, fossiliferous -----	2	6	157	7
Limestone, weathered, fossiliferous, full of holes -----	1	8	159	3
Limestone, fine, dense, impervious, patches of small shells -----	9	6	168	9
Limestone, fossiliferous -----	5	0	173	9
Limestone, impervious, full of small shells -----	2	10	176	7
Marl, soft -----	1	2	177	9
Limestone, fine, dense, marl seams -----	3	0	180	9
Limestone, shell -----	3	6	184	3
Limestone, marly, soft -----	1	6	185	9
Limestone, very fossiliferous, last 2 feet full of small shells -----	6	7	192	4

## Well C-77 1/

Owner: Bureau of Reclamation, U. S. Dept. of the Interior. Driller: -- .

River sand and silt -----	21	0	21	0
River gravel -----	2	0	23	0
Limestone, fine, dense, large fossils 25 to 28 feet -----	7	1	30	1

1/ See footnotes at end of table.

(Continued on next page)

Table 2.- Drillers' logs of wells in Travis County--Continued

	Thickness (feet)	Thickness (inches)	Depth (feet)	Depth (inches)
Well C-77--Continued 1/				
Marl, soft, seams -----	0	8	30	9
Limestone, fine, dense, arenaceous at bottom, 6-inch marl seam at bottom -----	9	8	40	5
Limestone, patchy, top 7-inches <u>Monopleura</u> -	12	6	52	11
Limestone, fine, dense, arenaceous -----	4	0	56	11
Limestone, very fossiliferous, marl streaks-----	8	9	65	8
Limestone, patchy -----	3	4	69	0
Full of small fossils -----	6	4	75	4
Limestone, fine, dense -----	7	2	82	6
Full of small fossils -----	7	0	89	6
Limestone, fine, dense -----	1	5	90	11
Shell limestone, weathered and porous, an abundance of small secondary calcite crystals. Water channel, artesian flow 45 gallons per minute. Sulphur water from 91 feet 6 inches to 141 feet	50	10	141	9
Limestone, arenaceous, fossiliferous -----	6	3	148	0
Limestone, fine, dense, occasional fossil, 2 feet fossiliferous layer 150 to 152 feet	13	9	161	9
Limestone, fine, dense, arenaceous, slightly weathered -----	1	9	163	6
Limestone, soft, marl -----	2	6	165	0
Limestone, granular, small shell fragments abundant, bottom fine dense limestone ---	11	6	176	6
Shell limestone, fairly porous and weathered, marl seams reported -----	7	10	184	4
Limestone, fine, dense -----	3	8	188	0
Limestone, fine, dense, fossiliferous -----	5	0	193	0
Full of small fossils -----	2	4	195	4
Limestone, fine, dense -----	4	4	199	8
Limestone, fossiliferous -----	1	0	200	8
Limestone, dark fine, dense with occasional fossil-core soft last 7 feet -----	22	1	222	9

## Well C-78 1/

Owner: Bureau of Reclamation, U. S. Dept. of the Interior. Driller: --.

Soil, marl, decomposed limestone -----	6	0	6	0
Fossil limestone, porous, weathered -----	4	0	10	0
Limestone, decomposed and broken, marl streaks -----	15	0	25	0
Limestone, arenaceous and patchy, slightly weathered. Less weathered and arenaceous at bottom -----	16	0	41	0

1/ See footnotes at end of table.

Table 2.- Drillers' logs of wells in Travis County--Continued

	Thickness (feet)	Thickness (inches)	Depth (feet)	Depth (inches)
Well C-78--Continued 1/				
Limestone, fine, dense -----	5	0	46	0
Limestone, patchy -----	2	6	48	6
Limestone, fine, dense, white -----	2	6	51	0
Limestone, hard, shell -----	6	6	57	6
Limestone, fine, dense, white, slightly arenaceous -----	5	0	62	6
Full of small fossils, bottom 6 feet slightly arenaceous -----	7	6	70	0
Fossil limestone, arenaceous -----	2	0	72	0
White limestone, full of small black fossils, slightly arenaceous around 79 feet -----	6	11	78	11
Limestone, fine, dense, and alternate layers of fossiliferous limestone -----	2	0	80	11
Full of small shell fragments -----	3	1	84	0
Limestone, patchy -----	4	0	88	0
Limestone, fine, dense, slightly patchy -----	5	9	93	9
Limestone, fine, dense, few layers of small black fossils near bottom -----	5	0	98	9

1/ See footnotes at end of table.

Thickness (feet)	Depth (feet)	Thickness (feet)	Depth (feet)
Well C-79			
Owner: W. S. Garwood. Driller: A. C. Clements.			
Clay, yellow, and lime- stone, tan -----	20	20	Limestone, hard ----- 40 262
Limestone, gray and buff- Marl, much pyrite -----	20	40	Limestone, cream- colored, dense ----- 23 285
Limestone, gray and tan - Marl, gray, many shells -	20	60	Limestone, tan ----- 19 304
Limestone, gray and tan - Marl, gray -----	40	100	Limestone, dense, small amount of sand ----- 16 320
Marl, gray -----	12	112	Shale, gray, soft ----- 54 374
Limestone, gray and tan - Marl, gray -----	13	125	No record ----- 46 420
Limestone, tan -----	11	136	Limestone, white with coarse sand inclu- sions ----- 20 440
Marl, many shells ----- Marly limestone, cream- colored -----	24	160	Sand ----- 26 466
	40	200	
	22	222

	Thickness (feet)	Depth (feet)		Thickness (feet)	Depth (feet)
Well D-181--Continued					
Limestone, arenaceous --	16	881	Sand, fine, white ---	4	943
Limestone, porous -----	8	889	Sand, very fine, white	10	953
Limestone, compact -----	12	901	Sand, white -----	7	960
Limestone, sandy -----	10	911	Sand, yellow to brown	6	966
Sand -----	8	919	Sand, coarse, white		
Sand and shale -----	8	927	and yellow -----	8	974
Sand, quartz, white, fine	8	935	Sand, coarse, white--	4	978
Sand, quartz, white, fine and shale -----	4	939	Shale and clay -----	42	1,020

## Well D-182

Owner: The University of Texas. Driller: Texas Water Supply Co.

Limestone, white and gray, chalky, with black shale partings -----	100	100	Limestone, dark gray, porous -----	30	390
Clay, blue and black, and some lignite -----	20	120	No record -----	1,210	1,600
Clay, blue, hard blue and black shale, and some gray limestone -----	10	130	Sand and silt, green- ish-gray -----	14	1,614
Shale, blue -----	10	140	Shale, dark gray to fine sand -----	26	1,640
Shale, blue and black --	10	150	Sand, greenish-gray -	20	1,660
Shale and limestone ----	10	160	Sand and sandy marl -	20	1,680
Shale, blue and black --	10	170	No record -----	20	1,700
Shale, dark bluish-gray, soft -----	30	200	Sand, marl, and silt, reddish-brown -----	15	1,715
Limestone, light gray, chalky, subcrystalline	10	210	Clay and marl, pink, with green streaks-	20	1,735
Limestone, light gray, hard with some marl --	60	270	No record -----	40	1,775
Shale, blue and grayish- white limestone -----	20	290	Clay, sandy, and sand	25	1,800
Shale, black, soft and chalky limestone -----	10	300	Sand, light greenish- gray -----	15	1,815
Limestone, light gray, soft, chalky -----	10	310	Sand, pinkish-white -	14	1,829
Limestone, gray, hard --	20	330	Sand, light gray ----	2	1,831
Limestone, dark brownish- gray with chert -----	30	360	Shale, sticky, hard -	2	1,833

Limestone, yellowish-gray --	6	951	Limestone, yellowish- gray without clay ---	4	1,267
Limestone, yellowish and light-gray, with shale ---	22	973	Limestone, yellowish- gray with a little clay -----	4	1,271
Limestone, yellowish -----	12	985	Limestone, yellowish- gray mixed with about 50 percent white clay -----	17	1,288
Limestone, yellowish-gray --	4	989	Limestone, yellowish- gray without clay ---	4	1,292
Limestone, bluish, shaly ---	4	993	Limestone, yellowish- gray -----	9	1,301
Limestone, gray, shaly -----	8	1,001	Limestone, yellowish- gray, with a little white clay -----	31	1,332
Limestone, gray and yellow -	3	1,004	Limestone, yellowish- gray -----	12	1,344
Limestone, yellowish-gray --	3	1,007	Limestone, yellowish- gray with a little clay -----	16	1,360
Limestone, yellowish-gray, with shale -----	16	1,023	Limestone, yellow, of light color -----	$21\frac{1}{2}$	$1,381\frac{1}{2}$
(At this point the drill rods were broken and lodged in the well, and this well was abandoned, December 31, 1889. January 1, 1890, the derrick was moved 8 feet to the southeast and a new hole started with 8-inch bit on January 3. On February 6, the depth of 1,023 feet was reached in the new hole.)			Limestone, light yellow	$14\frac{1}{2}$	1,396
Limestone, grayish-yellow, with clay -----	10	1,033	Limestone, light yellow, with clay -----	$4\frac{1}{2}$	$1,400\frac{1}{2}$
Clay, blue with little limestone -----	15	1,048	Limestone, darker, with clay -----	$5\frac{1}{2}$	1,406
Limestone, bluish-gray, with a little clay -----	10	1,058	Limestone, dark to medium yellow, with sand ---	11	1,417
Clay, blue, shale and limestone -----	10	1,068	Limestone, dark to medium yellow with bluish- clay -----	5	1,422
Limestone, grayish-yellow with blue clay shale -----	84	1,152	Limestone, dark to medium yellow with sand ----	5	1,427
Limestone, gray, without shale -----	6	1,158			

(Continued on next page)

Table 2.- Drillers' logs of wells in Travis County--Continued

Thickness (feet)	Depth (feet)		Thickness (feet)	Depth (feet)
Well H-67--Continued 2/				
Sand, with limestone, dark shale and pyrite -----	10	1,437	Limestone, yellowish-gray with sand and dark clay -----	47 1,507
(At this point the water flowed out in a solid stream, $2\frac{1}{2}$ by $3\frac{1}{2}$ inches.)			Clay, dark, shale with limestone and sand--	4 1,511
Clay, dark, shale with lime- stone -----	13	1,450	Clay, dark, shale with limestone sand and pyrite -----	8 1,519
Clay, dark, shale with lime- stone and sand -----	5	1,455	Clay, dark, shale, calcareous, with sand and flint -----	35 1,554
Sand, water with little limestone -----	5	1,460		
Well H-68 4/				
Owner: State of Texas. Driller: --.				
Soil and subsoil -----	5	5	Limestone and shale, hard, dark bluish-gray earthy pyri- tiferous containing	
Limestone, soft white chalky disintegrating more or less rapidly on exposure to the air -----	18	23	<u>Exogyra arietina</u> , <u>Gryphaea pitcheri</u> , <u>Janira</u> and <u>Toxaster</u> . Many of the fossils of these strata are wholly or in part composed of iron pyrites -----	47 279
Limestone, argillaceous, moderately hard, bluish-gray and cream- colored containing teeth and scales of fishes, <u>Inoceramus</u> ( <u>Trichites</u> ) <u>lexouxi</u> , ammonites, and other fossil remains	94	117	Limestone, soft sandy argillaceous with fossils like those at 232 to 279 feet -	25 304
Marl, dark, bluish-gray, indurated -----	14	131	Limestone, soft, earthy, sandy, fine- grained, of a dull gray hue -----	6 310
Limestone, compact, bluish-gray -----	31	162	Silico-magnesian lime- stone, indurated, bluish-gray, con- taining a good deal of sulphuret of iron	6 316
Clay, blue, marly with fossil shells coated with iron pyrites, chiefly <u>Exogyra arietina</u> , <u>Janira</u> and <u>Dentalium</u> -----	70	232		

2/ See footnotes at end of table. (Continued on next page)

4/ See footnotes at end of table.

Table 2.- Drillers' logs of wells in Travis County--Continued

Thickness (feet)	Depth (feet)	Thickness (feet)	Depth (feet)		
Well H-68--Continued 4/					
Limestone, grayish-white, earthy, fine-textured, sandy, (magnesian?), with <u>Toxaster</u> and <u>Exo-</u> <u>gyra</u> . Water at 323 feet; rose to 283 feet to with- in 40 feet of surface ---	13	329	Limestone, gray, earthy of a fine sandy texture, gypsum, nodules of flint, and masses of iron pyrites, and also a few organic re- mains, chiefly <u>Exogyra</u> and <u>Toxaster</u> -----	94	471
Magnesian limestone, bluish-gray sandy, with thin marly partings and abounding in organic remains- <u>Exogyra arietina</u> , <u>Gryphaea pitcheri</u> , <u>Janira</u> <u>Dentalina</u> , and fish teeth. Many of these fossils are coated with sulphuret of iron, which gives to them an elegantly bronzed appearance -----	48	377			

## Well H-70

Owner: F. B. Perry. Driller: H. McGillvray.

Surface dirt -----	20	20	Limestone -----	600	1,190
Gravel bed (water) -----	5	25	Sand rock (water) ----	25	1,215

a/ Analyzed by the Work Projects Administration at The University of Texas under the direction of Dr. E. P. Schoch, Director of the Bureau of Industrial Chemistry, and by E. W. Lohr, U. S. Department of Health.

b/ Analyzed by the Texas State Department of Health.

c/ Sulfate less than 10 parts per million.

d/ Nitrate less than 20 parts per million.

e/ Analyzed by Trinity Testing Laboratories, Austin, Tex.

f/ Analyzed by the Bureau of Industrial Chemistry, Austin, Tex.
