RECORDS OF WATER-LEVEL MEASUREMENTS IN JACKSON, MATAGORDA,
AND WHARTON COUNTIES, TEXAS 1934 TO APRIL 1958

December 1958

INTRODUCTION

The Texas Board of Water Engineers is charged with making, independently or in cooperation with other state and federal agencies, scientific investigations of the source, amount, and quality of ground-water supplies. To evaluate effects of ground-water development in relation to available supply, periodic measurements of water levels are made in principal reservoirs of the state through an observation well program conducted cooperatively by the Texas Board of Water Engineers and the United States Geological Survey.

This bulletin contains measurements of the depth to water in feet below land-surface datum in 50 wells in Jackson County, 22 wells in Matagorda County, and 39 wells in Wharton County. The records cover the period from 1934 to 1958. The map preceding each county table of water-level measurements shows the locations of the observation wells. Hydrographs showing the fluctuation of water levels in representative wells in each county are given following the table of water-level records. The annual precipitation at Edna, Matagorda, and Pierce is also shown on the hydrographs.
