RECORDS OF WATER-LEVEL MEASUREMENTS IN BRAZORIA,  
FORT BEND, AND WALLER COUNTIES, TEXAS, 1931 THROUGH JUNE 1958

Compiled by  
Frank A. Rayner, Geological Engineer  
Texas Board of Water Engineers

February 1959

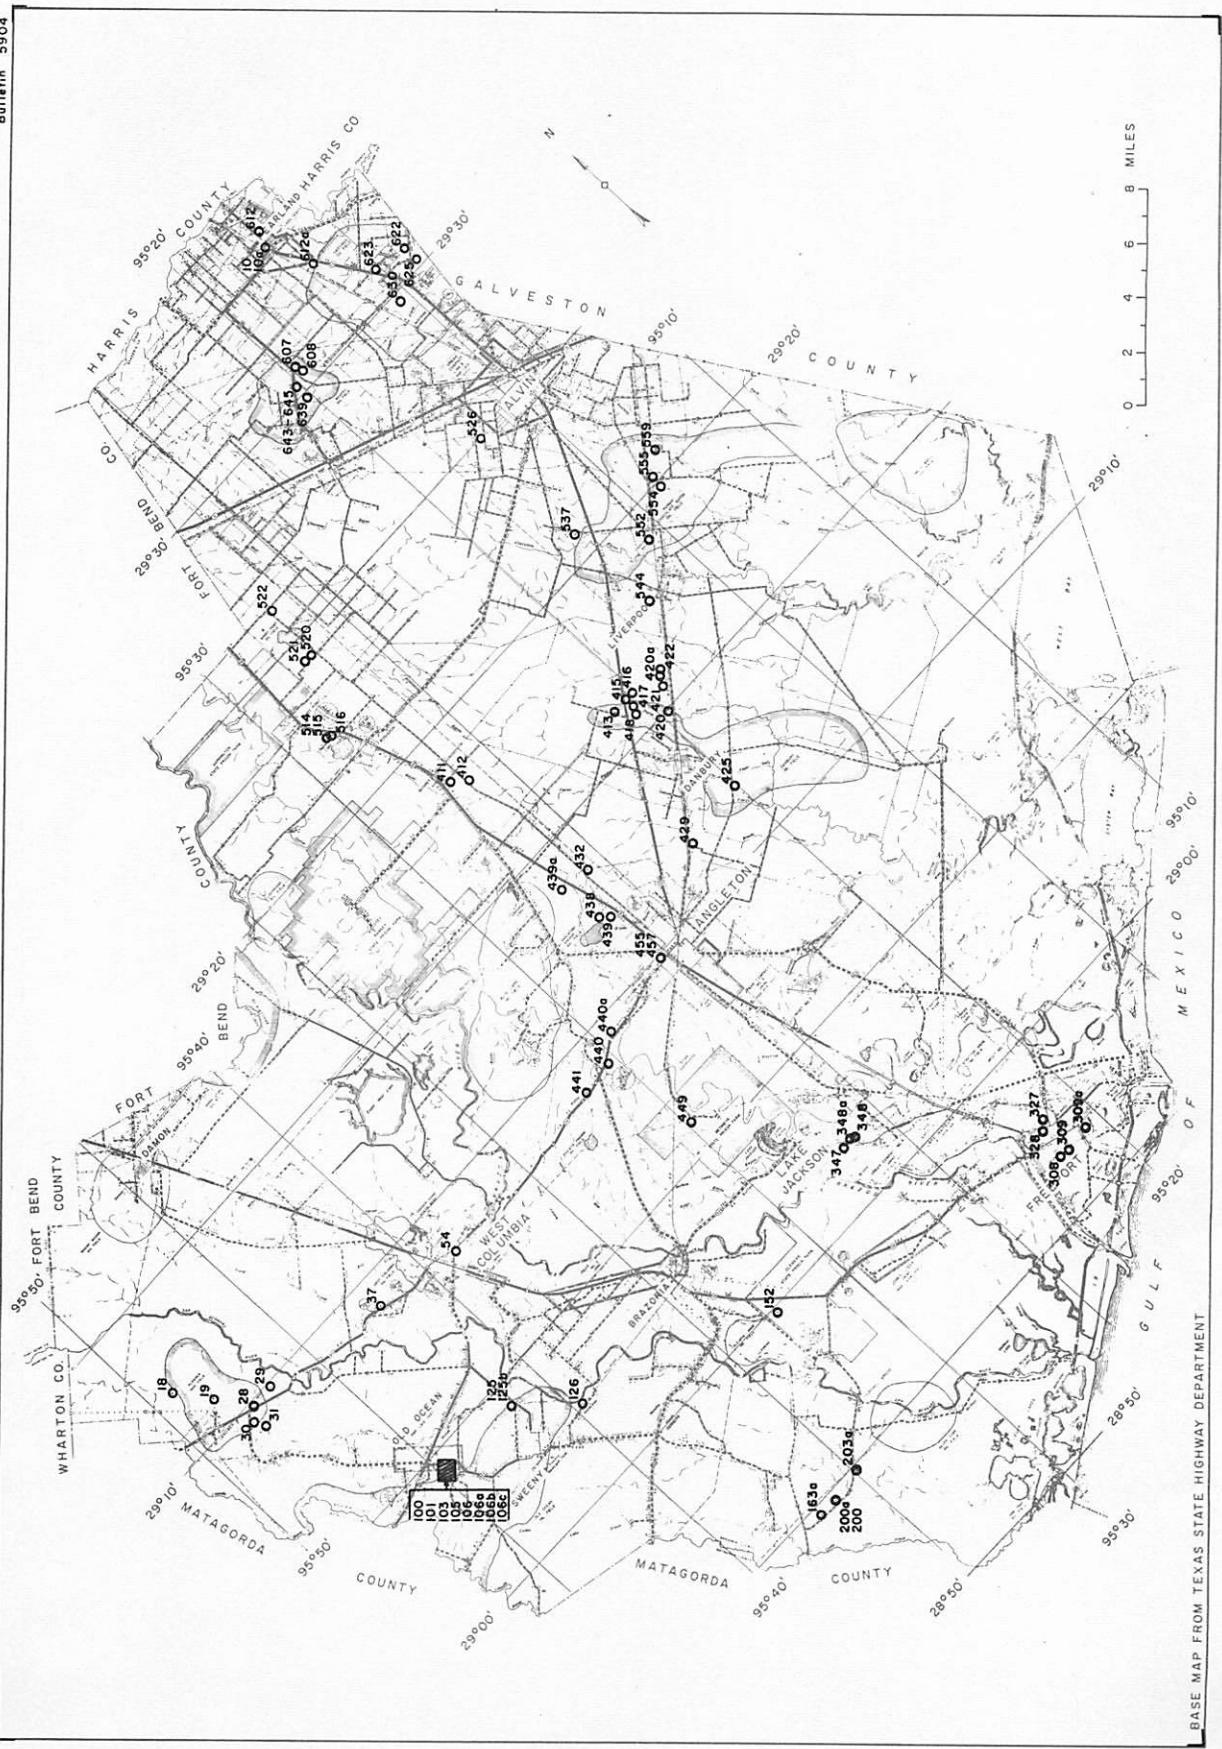

INTRODUCTION

The Texas Board of Water Engineers is charged with making, independently or in cooperation with other State and Federal agencies, scientific investigations of the source, amount, and quality of ground-water supplies. To evaluate effects of ground-water development in relation to available supply, periodic measurements of water levels are made in principal reservoirs of the State through an observation well program conducted cooperatively by the Texas Board of Water Engineers and the United States Geological Survey.

This bulletin contains measurements of the depth to water in feet below land-surface datum in 82 wells in Brazoria County, 57 wells in Fort Bend County, and 31 wells in Waller County. The period of record covers measurements made in observation wells from 1931 through June 1958.

Observation well location maps precede the corresponding table of water level measurements for each county. Hydrographs illustrating the fluctuation of water levels in selected wells in Brazoria, Fort Bend and Waller Counties follow the associated table of water-level measurements. Charts of the annual precipitation at Angleton and monthly precipitation at Hempstead are combined with their respective hydrographs.
