

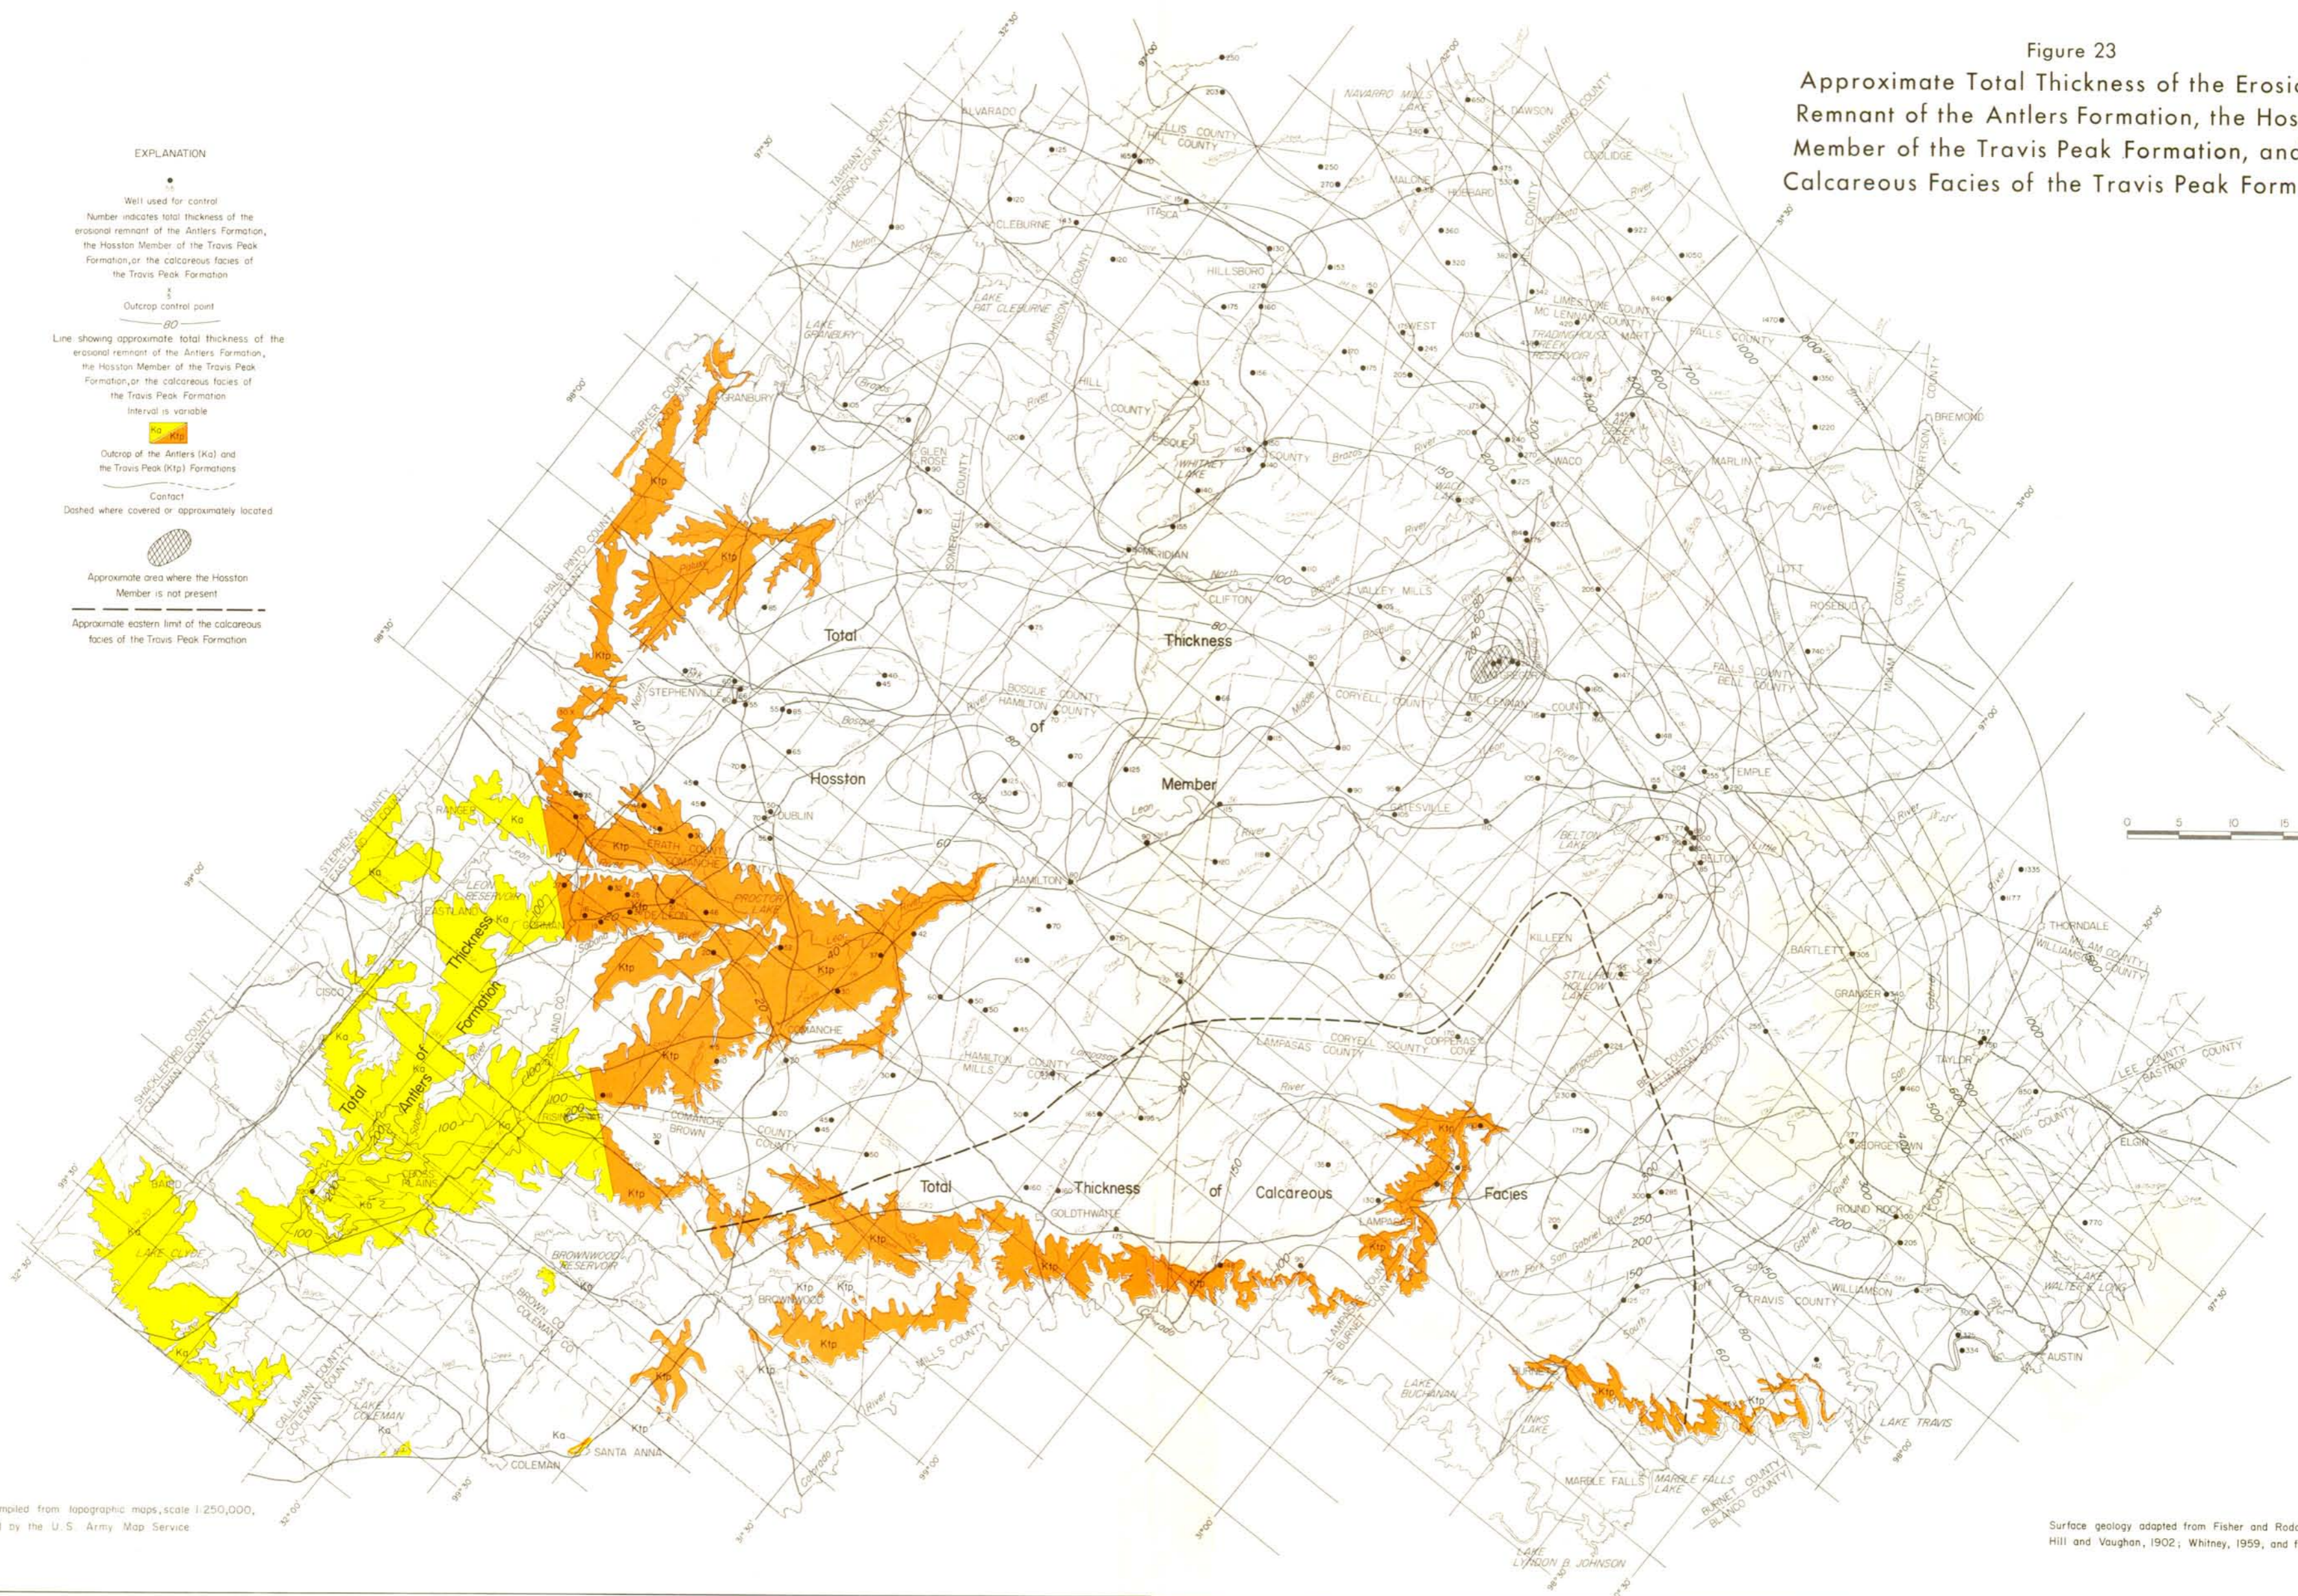

Figure 23
 Approximate Total Thickness of the Erosional Remnant of the Antlers Formation, the Hosston Member of the Travis Peak Formation, and the Calcareous Facies of the Travis Peak Formation

- EXPLANATION
- Well used for control
 - Number indicates total thickness of the erosional remnant of the Antlers Formation, the Hosston Member of the Travis Peak Formation, or the calcareous facies of the Travis Peak Formation
 - Outcrop control point
 - Line showing approximate total thickness of the erosional remnant of the Antlers Formation, the Hosston Member of the Travis Peak Formation, or the calcareous facies of the Travis Peak Formation
 - Interval is variable
 - Outcrop of the Antlers (Ka) and the Travis Peak (Kip) Formations
 - Contact
 - Dashed where covered or approximately located
 - Approximate area where the Hosston Member is not present
 - Approximate eastern limit of the calcareous facies of the Travis Peak Formation

Base compiled from topographic maps, scale 1:250,000, produced by the U.S. Army Map Service.

Surface geology adapted from Fisher and Rodda, 1966; Hill and Vaughan, 1902; Whitney, 1959, and field notes.
